# **Inflatable Mattress Review: Serta Elevated Diamond Coil Air Bed**

## Queen Air Mattress Review

With a name like Serta, you come to expect high quality. 75 years in the mattress business says a lot. Their foray into the air mattress arena turned out to be a winner as well. Their reputation is built on quality construction and comfort. The Serta Elevated Diamond Coil air bed provides that and more. Although priced at the higher end of the queen air mattress price range, the four star rating from reviewers at Amazon adds credence to the outstanding features of this air bed. The unique coil construction provides soft comfort for aching backs. The built-in electric air pump inflates and deflates the portable mattress within minutes. The sturdiness and height of this queen air bed are rivaled by few competitors. If you have temporary guests that you want to experience the ultimate in inflatable comfort, then you'll want to get this air bed for those occasions.

### Air Bed Dimensions

The dimensions of this bed are 80 inches by 60 inches by 18 inches. Although a few inches shorter than other "tall" queen air mattresses, this inflatable mattress still provides you with enough height to get you sleeping off the ground, as well as enough stability to sit on the side of the mattress. The obvious benefit is the convenience of not having to bend over and practically get on your hands and knees to get in or out of the bed. This bed also has a maximum capacity of 400 pounds. This should be more than enough capacity to support two average size adults. The size of this queen air bed allows for the convenient use of queen sized sheets as well, with the use of the four integrated sheet corner clips on the mattress. The clips provide a secure fit between your bedding and the underlying mattress.

### Inflatable Mattress Construction

The uniqueness of the Diamond Coil Air Bed comes from its construction. Its unique diamond coil construction gives the air bed a mattress-like feel while the soft pillow top adds extra softness and comfort. The coils simulate the feel of a traditional mattress. Heavy gauge puncture resistance plastic is used as the frame of the air mattress. The polyester construction also allows the mattress to suffer less stretching and air leakage than many competing brands. This thicker and more durable material provides an extremely strong and sturdy base for restful sleeping. On the underside of the bed, there is a non-slip, sure grip bottom, which is designed to grip the floor for added stability. This bottom construction creates a natural suction between the air bed and the floor which eliminates sliding.

### Portable Air Mattress Inflation / Deflation

Setting up the air mattress is a snap. The Serta Diamond Coil has an integrated electric pump that is recessed into the bed for a streamlined look. No parts of the electric pump are jutting out as an eyesore. There's even a convenient slot that holds the electric power cord, keeping it tucked out of the way. The motor operates quietly, but has a strong and powerful pump that inflates the bed in just four minutes. The same pump device is used to discharge air from the air bed as well. The mattress deflates just as quickly as it inflates, and fits snugly into the provide storage bag.
